Experience

Jukto Digital — *Bangladesh*

Senior Software Engineer — *October 2021 - Present*

- Owned system architecture and led full-stack development of a major client software upgrade, improving scalability, performance, and reliability through efficient design and issue resolution.
- Designed and implemented key LMS modules, including automated form generation and a flexible payment system with installment scheduling, reducing manual effort and improving operational efficiency.
- Led frontend architecture and managed AWS cloud infrastructure, ensuring high availability, optimized performance, and robust deployment pipelines across production systems.

Technology: React, Django Rest Framework, Koa, Typescript, AWS.

Softspace AB — *Malmø, Sweden*

Junior Software Engineer — *June 2020 - September 2021*

- Developed full-stack web applications across multiple projects, including a social networking platform; analyzed requirements and contributed to solution design in an Agile team.
- Built the query-on-read feed, WebSocket real-time notifications, and Elasticsearch search with pagination and caching, cutting response time by 15%; troubleshot production escalations by deep diving into source code, analyzing network traces, and reviewing product configurations, boosting performance by 10%.

Technology: Reactjs, Express.js, Material-UI, Styled components, HTML, CSS, Javascript.

Projects

Sarothi: Exam & Coaching Management — *Web*

Next.js,Typescript, Go, PostgreSQL, Redis, Docker — *Online*

Delivered a BCS exam coaching platform covering admissions, payments, live classes, a question bank and timed mock exams with rankings. Designed a Redis-backed exam engine with batched Postgres sync and group-committed grading for 1 lakh students at once, load-tested at 10k answer saves/s with p95 110 ms.

Salify: ERP & POS — *Web*

React, Typescript, DRF, PostgreSQL, Redis — *Online*

Developed a multi-branch sales ERP covering POS billing, inventory, inter-branch transfers, purchasing and customer credit, with role- and branch-scoped access. Fixed a stock overstatement of up to 36% with weighted-average costing, cut N+1 queries (22 → 2) and cut the frontend bundle by 70%.

Axon: API client — *Desktop*

Rust, Tauri 2, SolidJS, Tokio, Sqlite. — *Offline First*

Engineered an offline-first, Postman-class API client as a 22-crate Rust workspace supporting 9 protocols: REST, GraphQL, gRPC, WebSocket, SOAP, SSE, MQTT, MCP and Socket.IO. Designed serverless peer-to-peer team sync on Automerge CRDTs with encrypted secrets and code-based pairing, backed by 1,200 CI-gated tests.

Skills

Framework: DRF, FastAPI, Nextjs, React Native, Electron, Koa.js, Express.js, Django, Tauri

Language: Python, Typescript, Javascript, Kotlin, Rust, C++

Database: MySQL, PostgreSQL, MonoDB.

Tools: Git, Docker, Claude.

Education

Khulna University — *Khulna, Bangladesh*

MSc and BSc in computer science and engineering — *Jan. 2016 - jan. 2024*

At KU, I built a strong foundation in algorithms, data structures, operating systems, databases, and AI/ML, with advanced coursework in distributed databases and ubiquitous computing. I placed in the top 10 nationally in the Code-Samurai contest, won 3rd place at KU CSE Fest 2017, competed in ACM-ICPC and NCPC, and solved 400+ online judge problems. As President of Cluster and Convenor of KU CSE Fest 2019, I led teams organizing inter-university contests, hackathons, and workshops, and I also played for the department volleyball and football teams.
