Experience

Jukto Digital

Bangladesh

SENIOR SOFTWARE ENGINEER

October 2021 - Present

- Owned system architecture and led full-stack development of a major client software upgrade, improving scalability, performance, and reliability through efficient design and issue resolution.
- Designed and implemented key LMS modules, including automated form generation and a flexible payment system with installment scheduling, reducing manual effort and improving operational efficiency.
- Led frontend architecture and managed AWS cloud infrastructure, ensuring high availability, optimized performance, and robust deployment pipelines across production systems.

Technology: React, Django, Django Rest Framework, Celery, AWS.

Softspace AB

Malmö, Sweden

JUNIOR SOFTWARE ENGINEER

June 2020 - September 2021

- Analyzed requirements and contributed to solution design in an Agile environment, improving development efficiency and reducing feature delivery time.
- Developed frontend features for a social networking platform and implemented secure authentication, including two-step verification and role-based access control (RBAC).

Technology: Reactjs, Express.js, Sequelize, Material-UI, Styled components, HTML, CSS, Javascript.

Projects

EduGate

Personal

NESTJS, NEXTJS, POSTGRESQL, PRISMA, TYPESCRIPT

Web

EduGate – Engineered a study-abroad management platform covering admissions, scholarships, applications, visa processing, document verification, and payments. Architected a modular monolith with 30+ bounded modules and event-driven communication to ensure scalability, loose coupling, and seamless transition to microservices.

Storyteller

Personal

PYTHON, RAG, CHROMADB, OPENROUTER, OCR

CLI

Storyteller – Built a Bangla-first RAG-based CLI application for generating citation-backed social media posts from local document collections. Designed document ingestion, OCR, semantic retrieval, prompt templating, and LLM integration with support for multiple AI models, ensuring factually grounded and hallucination-resistant content generation.

Systa: Learn System Design

Personal

KOTLIN, COMPOSE, ROOM

Android

Built Systa, an offline Android application that teaches system design through interactive simulations, structured learning paths, and real-world architecture case studies. Implemented 20+ distributed systems simulators (e.g., load balancing, caching, sharding, rate limiting), enabling hands-on exploration of scalability, fault tolerance, and performance trade-offs.

Skills

Framework: DRF, React, React Native, Electron, Koa.js, Express.js, FastAPI, Django

Language: Python, Typescript, Javascript, Java.

Database: MySQL, PostgreSQL, MongoDB.

Tools: Git, Docker, Vs code, Claude, Antigravity.

Education

Khulna University

Khulna, Bangladesh

MSC AND BSC IN COMPUTER SCIENCE AND ENGINEERING

Jan. 2016 - Jan. 2024

I hold a Master of Science (MSc) degree with a research focus on Natural Language Processing (NLP). My engagement with NLP began during my undergraduate studies and continued through my postgraduate research, reflecting a sustained and in-depth specialization in the field. I have authored two publications:

- "KULemma: Toward a Comprehensive Bangla Lemmatizer", published in the proceedings of ICEEICT 2024
- "BNNNet: Towards A Comprehensive Bangla WordNet", published in the proceedings of ICCIT 2020
