Experience

Jukto Digital

Bangladesh

SENIOR SOFTWARE ENGINEER

October 2021 - Present

- Took ownership of core system design decisions and oversaw the full-stack development of a comprehensive client software upgrade, ensuring scalable architecture, efficient issue resolution, and enhanced overall system performance.
- Engineered and delivered an automated form generation system within the Learning Management System to streamline the admission process, significantly reducing manual intervention and accelerating offer letter generation by 80%.
- Designed and developed a comprehensive payment system within the LMS, enabling automated installment scheduling and tailored payment plans for both agents and students, while ensuring accurate logging of all payment records and significantly enhancing operational efficiency.
- Led frontend design and development for a renowned LMS client, making key architectural decisions, resolving complex issues, and building a robust coding framework.
- Managed cloud infrastructure and server operations on AWS, including deployment, monitoring, performance optimization, and proactive maintenance to ensure high availability and system reliability.

Technology: Django, Django Rest Framework, Reactjs, Celery, Nginx, AWS.

Softspace AB

Malmö, Sweden

JUNIOR SOFTWARE ENGINEER

June 2020 - September 2021

- Analyzed software requirements and client needs, researched modern solutions, and actively contributed to developer discussions while adhering to Agile principles and best practices to streamline development and reduce feature turnaround time.
- Collaborated as part of a development team and took full ownership of the frontend design, creating an engaging and user-friendly interface for a social networking platform with Facebook-like features.
- Designed and implemented a two-step verification authentication system along with a custom role-based access control (RBAC) mechanism to enhance security and enforce user-specific permissions.

Technology: Reactjs, Express.js, Sequelize, Material-UI, Styled components.

Projects

RetailFlow

Personal

REACT.JS, DJANGO REST FRAMEWORK, TYPESCRIPT, MYSQL

Mar. 2025 - Present

- Built a full-featured web-based shop management system enabling users to manage products, set pricing, create invoices, register customers, and track stock levels across multiple outlets through a clean and intuitive interface.
- Implemented dynamic invoice generation with PDF export, customer and invoice reporting, and real-time stock updates, allowing seamless inventory control and comprehensive business reporting for small to medium-sized retailers.

Brta Guide

Personal

KOA.JS, REACT NATIVE, TYPESCRIPT, MONGODB.

Oct 2024-Dec 2024

- Designed and developed a mobile application (BRTA Guide) to assist users in Bangladesh with driving license preparation, renewals, and vehicle registration. Built the frontend using React Native and implemented a backend with Koa and MongoDB, ensuring a smooth and responsive user experience.
- Managed the entire development lifecycle, including server setup and deployment with Nginx. Overcame significant challenges in sourcing and structuring accurate government-related data, which was critical to delivering reliable and user-focused functionality.

Skills

Technical Skill: Reactjs, React Native, DRF, Koa, Express, Python, Javascript, Typescript, MySQL, MongoDB, Material-UI, HTML, CSS, Git, AWS.

Soft Skill: Quick Learning, Problem Solving, Organizing, Accountability, Strategic thinking.

Education

Khulna University

Khulna, Bangladesh

MSC AND BSC IN COMPUTER SCIENCE AND ENGINEERING

Jan. 2016 - Jan. 2024

I hold a Master of Science (MSc) degree with a research focus on Natural Language Processing (NLP). My involvement with NLP began during my undergraduate studies and continued throughout my post-graduate research. I have authored two publications:

- "KULemma: Toward a Comprehensive Bangla Lemmatizer", published in the proceedings of ICEEICT 2024
- "BNNet: Towards A Comprehensive Bangla WordNet", published in the proceedings of ICCIT 2020
